

Wideband Video Buffer

LH4002A / LH4002 / LH4002C

FEATURES

- DC to 300 MHz Bandwidth with $V_S = \pm 5V$
- 3000 V/ μs Slew Rate into 50Ω

APPLICATIONS

- Wideband Amplifier Buffer
- Wideband Line Driver
- Video
- Coaxial Cable Driver

GENERAL DESCRIPTION

The LH4002 family is a high speed voltage follower designed to drive video signals from DC up to 300MHz. At voltage supplies of $\pm 5V$, the LH4002 family will provide up to 80mA into 50Ω at slew rates of 2000 V/ μs .

The LH4002 family is intended to fulfill a wide range of high speed applications including video distribution, impedance transformation, and load isolation. It is also suitable for use in current booster applications within an op amp loop. This allows the output current capability of existing op amps to be increased.

Note 1: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. DC and AC electrical specifications do not apply when operating the device beyond its rated operating conditions.

Note 2: Slew rate is measured with 50Ω source impedance at $25^\circ C$. For accurate measurements, the input slew rate should be at least $5000V/\mu s$.

Note 3: The test circuit consists of the human body model of $120pF$ in series with 1500Ω .

Note 4: The maximum power dissipation is a function of $T_{J(max)}$, θ_{JA} and T_A . The maximum allowable power dissipation at any ambient temperature is $P_D = (T_{J(max)} - T_A)/\theta_{JA}$.

Note 5: Limits are guaranteed by testing, correlation or periodic characterization.

Note 6: For N package, θ_{JA} is measured by soldering the unit directly on a printed circuit board and V^- pins are connected to 2 square inches of 2 oz copper.
